

Measurement: distance between spheres

Measure distance between centers of the two spheres.

Change to "Surface Rendering" and open "Measurement" dialog from "Main Control".

Show "fitting" tab and select "sphere (4 points or more)".

Click on the target sphere over four times (green points) to define sphere (red wire frame) and press "Set". If fitting to sphere failed, click more points scattered.

Measurement ×

basic fitting

point line (2 points or more)

plane (3 points or more) sphere (4 points or more)

cylinder (6 points or more) cone (6 points or more)

target clipping plane

coordinates (x, y, z) (measuring unit: mm)

```
-0.148989, 0.0701721, -0.140211  
-0.173508, -0.000472873, -0.188194  
-0.207122, 0.0805199, -0.181806  
-0.131943, 0.109364, -0.160673
```

number of points: 4

result (measuring unit: mm)

```
center = -0.1454, 0.0606603, -0.210302  
diameter = 0.141649, volume = 0.00148812
```

Set sphere is drawn by yellow wireframe and "sphere1" is added to list.

Click on another sphere over four times (green points) to define sphere (red wire frame) and press "Set".

Select "sphere1" and "sphere2" by Ctrl + click and "distance between center of sphere2 and center of sphere1" is shown in "result" area. Selected spheres are drawn by cyan wireframe and line goes through both center of "sphere1" and "sphere2" is drawn red.
